

Table of Contents

1.	Objectives	1
2.	Required performance	3
3.	Economics	5
3.1	Batch size	5
3.2	Capital costs	6
3.3	Revenue costs	6
3.4	Energy demands	7
4.	Beer types	9
4.1	Lager	10
4.2	Ale	10
4.3	Wheat beers	10
4.4	Alcohol-free and low-alcohol beers	11
4.5	Diet beer	11
4.6	Other beer types	11
5.	Process definitions	13
5.1	Primary fermentation	13
5.2	Lagering	13
5.2.1	Secondary fermentation	13
5.2.2	Maturation	14
5.2.3	Stabilisation	14
5.3	Conditioning.....	14
5.4	Traditional batch processing	14
5.6	High gravity brewing	15
5.7	Continuous fermentation	15
5.8	Continuous maturation	15

6.	Principles of action	17
6.1	Wort	17
6.1.1	Strength	17
6.1.2	Temperature	17
6.1.3	Sterility	17
6.1.4	Clarity	17
6.1.5	Oxygen and lipids	18
6.1.6	Trace elements	18
6.1.7	Nitrogenous compounds	18
6.1.8	Carbohydrates	19
6.1.9	Sulphur compounds	19
6.2	Yeast.....	20
6.2.1	Yeast types	20
6.2.2	Yeast strain selection	23
	- Flocculation	23
	- Adaptability to maltose	25
	- Taste Profile	26
	- Nutrition requirements	26
	- Fermentation rate	26
	- Small scale estimation of yeast strain characteristics	26
6.2.3	Yeast propagation	26
	- Isolation	27
	- Culture maintenance	27
	- Starter cultures	28
	- Propagation in the laboratory	28
	- Propagation in the brewery	28
6.3	Fermentation biochemistry	31
6.3.1	Fermentation and respiration in brewery yeasts	31

6.3.2	Outline of fermentation	31
6.3.3	Carbohydrate utilisation by yeast	33
6.3.4	Amino acid utilisation by yeast	36
6.3.5	Production of flavour-active metabolites	41
	- Higher alcohols	42
	- Esters.....	44
	- Sulphur compounds	47
	- Aldehydes	50
	- Ketones	51
	- Organic acids	54
	- Fatty acids	55
6.4	Fermentation practice	56
6.4.1	Fermentation management	56
	- Bottom fermentation.....	56
	- Top fermentation	58
	- Ethanol yield and fermentation efficiency	58
6.4.2	Fermentation vessels	60
	- Choice	60
	- Size and filling	60
6.4.3	Yeast addition (Pitching)	62
	- Physical pitching methods.....	62
	- Measurement of the quantity of yeast pitched	62
	- Volumetric methods	62
	- Addition by mass	63
	- Addition by weight	63
	- Methods for measuring and compensating for slurry composition	64
	- Direct pitching assessment methods	65

6.4.4	Heat production and removal	65
	- Fermentation exotherm	65
	- Cooling	66
6.4.5	Temperature control	66
	- Heat transfer	67
6.4.6	Effects of temperature and pressure	73
6.4.7	Effects of agitation	75
6.4.8	Foam control	75
6.4.9	Yeast handling	75
	- Removal	75
	- Storage	78
	- Purification	80
	- Re-use	81
	- Transport	82
6.4.10	Carbon dioxide recovery	83
6.4.11	Multi-brew methods	83
6.4.12	High gravity fermentation	85
6.5	Processing for transfer to maturation	86
6.5.1	Composition at transfer	86
6.5.2	Single-vessel vs. two-vessel processing	86
6.6	Post-Fermentation cooling	88
	- Plate arrangements	89
	- Secondary coolant supply	89
	- Control system	90
	- Energy demands	90
6.7	Lagering/maturation	92
6.7.1	Maturation philosophy	92

6.7.2	Maturation biochemistry	92
	- Vicinal diketones.....	92
	- Hydrogen sulphide.....	94
	- Acetaldehyde	94
	- Development of flavour fullness	95
6.7.3	Maturation practice	96
	- Temperature control	96
	- Oxygen control	96
	- Clarification	97
	- Stabilisation treatments	97
6.7.4	Product adjustments	99
	- Carbon dioxide/nitrogen	99
	- Sulphur dioxide and sulphites	100
	- Colour.....	100
	- Foam	100
	- Hop products.....	100
	- Water.....	101
	- Blending	101
6.7.5	Beer recovery from waste yeast	101
	- Quantity of recoverable beer	102
	- Beer recovery systems	102
6.8	Special beer types.....	105
6.8.1	Cask conditioned beer	105
	- Traditional top fermenting system	105
	- Yorkshire square system	108
	- Burton union system	109
	- Cylindroconical fermenters	110
	- Yeast husbandry.....	111

6.8.2	Traditionally processed lager	113
	- Traditional bottom fermentation system	113
	- Use of a wort collecting vessel	115
	- Use of 'krausen'	116
	- Use of two different yeast strains	116
	- Use of two different storage temperatures	116
6.8.3	Bottle conditioned beer	117
6.8.4	Wheat beers	118
	- South German wheat beer	118
	- Berliner Weiss	119
	- Lambic and gucuze.....	119
	- Hoegaardse wit	120
	- Wheat as an adjunct	120
6.8.5	Low-alcohol and alcohol-free beers	120
6.8.6	Diet beers	122
6.8.7	Sorghum beer.....	123
6.8.8	Other beers	123
6.9	Continuous production technologies	124
6.9.1	Continuous fermentation	124
	- Free cell systems	124
	- Immobilised systems	127
6.9.2	Continuous maturation	129
6.9.3	Low-alcohol and alcohol-free beers	130
7.	Data on process fluids	131
7.1	Beer	131
7.2	Coolants.....	134

8.	Equipment design	139
8.1	Fermenters	139
8.1.1	Design criteria	139
8.1.2	Vessel construction	139
8.1.3	Materials of construction	140
8.1.4	Design standards	140
8.1.5	Cooling jackets	141
8.1.6	Cooling system	146
8.1.7	Temperature control	147
8.1.8	Cleaning-in-place (CIP)	147
8.1.9	Vessel fittings	151
8.1.10	Insulation	154
8.1.11	Water consumption	158
8.2	Centrifuge	159
8.2.1	Solid/liquid separation	159
8.2.2	Hermetic design	163
8.2.3	Energy requirements	163
8.3	Yeast press design	164
9.	Quality control	165
9.1	General	165
9.2	Quality control management and standards	165
9.3	Laboratory methods	166
9.4	Quality control schedules	168
10.	Special considerations	171
10.1	Operator safety	171
10.2	Carbon dioxide removal/ventilation	173
10.3	Use of nitrogen	174
11.	Research and development needs	175
12.	References	179
