Contents

Beer – the oldest drink	21	- Hop pellets	72
		- Hop extracts	75
• 1 Raw Materials	39		
1.1 Barley	39	1.3 Water	79
1.1.1 Barley types and varieties	39	1.3.1 Water cycle	79
- Types of barley	39	1.3.2 Fresh water use in the brewery	80
- Barley varieties	40	1.3.3 Obtaining water	81
1.1.2 Barley cultivation	41	- Extracting ground water	81
1.1.3 Structure of the barley kernel	42	- Extraction of spring water	82
- External structure	42	- Extraction of surface water	82
- Internal structure	42	- Importance of a	
1.1.4 Composition and properties	44	private water supply	84
- Carbohydrates	44	1.3.4 Water requirements	84
- Nitrogen compounds (proteins) ..	48	- Drinking water requirements	84
- Fats (Lipids)	50	- Brewing water requirements	85
- Inorganic material	52	- Significance of individual ions ..	88
- Other substances	52	1.3.5 Water improvement procedures ..	89
1.1.5 Barley evaluation	55	- Procedure to remove	
- Hand evaluation	55	suspended matter	89
- Physical and chemical		- Removal of dissolved materials ..	90
examinations	57	- Improvement of the residual	
- Physiological examinations	58	alkalinity of water	91
		- Water sterilisation	93
1.2 Hops	59	- Degassing of water	94
1.2.1 Growing regions	59	1.3.6 Possibilities of saving water	95
1.2.2 Harvesting, drying and			
stabilising hops	62	1.4 Yeast	96
- Harvesting	62	1.4.1 Structure and composition	
- Drying	62	of the yeast cell	96
- Stabilising the hops	63	1.4.2 Metabolism of the yeast cell	100
1.2.3 Hop cone structure	63	1.4.3 Yeast reproduction and growth ..	101
1.2.4 Composition and properties	63	1.4.4 Characteristics of brewing yeasts ..	103
- Bitter substances or hop resins ..	64	- Morphological characteristics ..	103
- Hop oil	66	- Physiological differences	104
- Tannins or polyphenols	67	- Fermentation technological	
- Nitrogen compounds	68	differences	104
1.2.5 Hop evaluation	68	- Systematic classification	104
- Hand evaluation of hop cones ..	68		
- Bitter substance content	69	1.5 Adjuncts	105
1.2.6 Hop varieties	70	1.5.1 Maize	105
1.2.7 Hop products	71	1.5.2 Rice	107

1.5.3	Barley	107	2.4	Barley germination	154
1.5.4	Sorghum / millet	107	2.4.1	Processes occurring during germination	154
1.5.5	Wheat	108		- Growth processes	154
1.5.6	Sugar	108		- Enzyme formation	155
1.5.7	Glucose syrup	110		- Changes to storage materials	157
1.5.8	Colouring sugar (also couleur)	110		- Conclusions about how to perform	165
• 2	Malt Production	114	2.4.2	Germination methods	165
2.1	Intake, cleaning, grading, transfer	114		- Floor maltings	165
2.1.1	Barley intake	114		- Carrying out germination	177
	- Intake of barley from lorries or rail	115		- Control of germination	178
	- Intake of barley from ships	115	2.5	Malt kilning	178
2.1.2	Cleaning and grading the barley	116	2.5.1	Changes during kilning	178
	- Barley pre-cleaning	117		- Lowering of the water content	178
	- Magnetic devices	119		- Termination of germination and modification	179
	- Dry destoner	119		- Formation of colour and flavour	179
	- Deawner	120		- Formation of DMS	181
	- Grain cleaner (trieur)	121		- Effect of kilning temperature	181
	- Barley grading	123		- Formation of nitrosamines	182
2.1.3	Transfer of barley and malt	125		- Enzyme inactivation	183
	- Mechanical conveyors	127	2.5.2	Kiln structure	183
	- Pneumatic conveyors	130		- Heating and ventilation of the kiln	183
2.1.4	Equipment for dust removal	133		- Older type two floor kilns	186
	- Cyclones	134		- Kilns with dumping floors	186
	- Dust filters	134		- Flat kilns with a loader and unloader	187
				- Vertical kilning	189
2.2	Drying and storage of barley	137	2.5.3	Management of kilning	189
2.2.1	Barley respiration	137		- Production of Pilsner malt	191
2.2.2	Barley drying	138		- Production of Munich malt	192
2.2.3	Barley cooling	139		- Unloading the kiln	192
2.2.4	Barley storage	140		- Control of kilning	193
	- Storage in silos	140	2.6	Treatment of malt after kilning	193
	- Storage in bins	141	2.6.1	Cooling of the kilned malt	193
	- Pest infestations	142	2.6.2	Malt cleaning	193
			2.6.3	Malt storage	194
2.3	Barley steeping	143	2.6.4	Malt polishing	194
2.3.1	Processes during steeping	143	2.7	Yield during malting	195
	- Water uptake	143			
	- Provision of oxygen	146			
	- Cleaning	146			
2.3.2	Steep vessels	146			
2.3.3	The steeping process	152			

2.8	Malt evaluation	195	- Weighing the malt charge	225
2.8.1	Hand evaluation	195	3.1.2 Basic aspects of milling	228
2.8.2	Mechanical examinations	196	3.1.3 Dry milling	229
	- Screening	196	- Six roller mills	229
	- Thousand corn weight	196	- Five roller mills	231
	- Hectolitre weight	196	- Four roller mills	231
	- Sinker test (floaters)	196	- Two roller mills	231
	- Steeliness	196	- Rollers of malt mills	232
	- Friability	196	- Conditioned dry milling	235
	- Acrospire length	196	- Grist case	235
	- Germinating capacity	196	- Hammer mills	236
	- Density	196	3.1.4 Wet milling	237
	- Calcofluor-Carlsberg method	197	3.1.5 Steep conditioning	238
2.8.3	Chemical technological methods	197	3.1.6 Fine comminution with water	242
	- Water content	197	3.1.7 Evaluation of the grist	244
	- Congress mashing method	197	3.2 Mashing	245
2.8.4	Malt supply contract	201	3.2.1 Transformations during mashing	245
2.9	Special malts and malt		- Purpose of mashing	245
	from other cereals	202	- Properties of enzymes	245
2.9.1	Pilsner malt (pale malt)	202	- Starch degradation	246
2.9.2	Dark malt (Munich type)	202	- b-glucan degradation	252
2.9.3	Vienna malt	202	- Conversion of fatty matter (lipids)	258
2.9.4	Brumalt/melanoidin malt	203	- Other degradation and	
2.9.5	Caramel malt	203	dissolving	261
2.9.6	Acid malt	204	- Biological acidification	261
2.9.7	Short grown and chit malts	204	- Composition of the extract	267
2.9.8	Smoked malt	205	3.2.2 Vessels for mashing	268
2.9.9	Diastase malt	205	- Mash vessels	268
2.9.10	Roasted malt	205	3.2.3 Mashing in	273
2.9.11	Roasted malt beer	206	- Addition of the brewing water	273
2.9.12	Wheat malt	206	- Mashing-in temperature	273
2.9.13	Malt extract	207	- Mixing of the water and grist	275
2.9.14	Malt from other bread cereals	208	3.2.4 Mashing	277
2.9.15	Sorghum malt	209	- Parameters to consider when	
2.9.16	Usage of different types	210	mashing	277
2.10	Safety precautions in maltings	212	- Infusion mashing	280
			- Decoction processes	281
• 3	Wort Production	224	3.2.5 Mashing duration	295
3.1	Malt milling	224	3.2.6 Control of mashing	296
3.1.1	Pretreatment of the malt	224	3.2.7 Mashing intensity	296
	- Removal of dust and stones	224	3.3 Lautering	296

3.3.1	First wort and second wort	296	3.4.4	Monitoring the cast wort	372
3.3.2	Last runnings	298	3.5	Brewhouse yield	373
3.3.3	Mash separation with a lauter tun	299	3.5.1	Calculating the brewhouse yield	373
	- Design of an older lauter tun	300		- Determination of the	
	- Design of newer lauter tuns	303		mass percent	374
	- Operating sequence	307		- Determination of the mass	375
3.3.4	Wort separation with a mash filter	310		- Conversion of the volume	379
	- Traditional mash filters	310		- Calculation of the amount	379
	- New generation mash filters	311		- Determination of the	
3.3.5	Spent grains	320		brewhouse yield (Ybh)	380
	- Transfer of spent grains	321	3.5.2	Factors affecting the yield	380
	- Spent grain analysis	321	3.5.3	Calculation of a brewhouse yield	381
3.4	Wort boiling	323	3.6	Brewhouse equipment	381
3.4.1	Wort boiling operations	323	3.6.1	Number and arrangement of the	381
	- Extraction and transformation	324	3.6.2	Vessel size	382
	- Precipitation of protein	325	3.6.3	Vessel material	383
	- Evaporation of water	326	3.6.4	Brewhouse capacity	383
	- Wort sterilisation	327	3.6.5	Special types of brewhouse	384
	- Destruction of all enzymes	327		- Pub brewery brewhouses	384
	- Thermal exposure of the wort	327		- Integral brewhouse	385
	- Lowering the pH of the wort	328		- Research and training	
	- Formation of reducing substances	328		brewhouses	385
	- Evaporation of undesirable		3.7	Casting the wort	386
	aroma substances	328	3.8	Removal of the coarse break	386
	- Zinc content of the wort	330	3.8.1	Coolship	387
	- Unboiled wort – cast wort	330	3.8.2	Settling tank	387
	- Unboiled wort – cast wor	330		- Operating principle	
3.4.2	Design and heating			of the whirlpool	388
	of the wort kettle	331		- Whirlpool design	390
	- Directly heated wort kettles	331		- Performing wort clarification	
	- Steam heated wort kettles	331		in a whirlpool	391
	- Wort kettle		3.8.4	Separators	393
	with low pressure boiling	336		- The principle used	
	- High temperature wort boiling	345		in centrifugation	393
	- Energy saving			- Types of centrifugal separators	394
	wort boiling systems	346		- Design/operation of	
	- Other modern			self-cleaning separators	395
	wort boiling systems	352		- Evaluation of	
	- Vapour condensate	366		hot wort separation	397
	- Underback (wort buffer vessel)	367			
3.4.3	Performing wort boiling	367			
	- Boiling the wort	368			

3.8.5	Recovery of wort from cloudy wort	398			
3.9	Cooling and clarifying the wort . . .	398			
3.9.1	Procedures during cooling	398			
	- Wort cooling	398			
	- Formation and optimal removal of cold break	399			
	- Wort aeration	399			
	- Changes in wort concentration . .	399			
3.9.2	Equipment for wort cooling	400			
	- Structure of plate heat exchangers	400			
	- Method of operation	402			
	- Advantages of the plate heat exchanger	404			
3.9.3	Basic principles and	404			
	- Methods of wort aeration	405			
	- Time of yeast aeration	406			
3.9.4	Equipment for cold break removal .	406			
	- Kieselguhr filter	407			
	- Flotation	407			
3.9.5	Wort cooling lines	408			
3.10	Control and monitoring	408			
3.11	Safety at work during	411			
	- Accident prevention – milling area	411			
	- Accident prevention – brewing vessels	411			
	- Accident prevention – separators	412			
• 4	Beer Production	415			
4.1	Changes during fermentation . . .	415			
4.1.1	Yeast: the brewer's most important partner	415			
4.1.2	Metabolism of the yeast	418			
	- Fermentation of the sugar	418			
	- Protein metabolism	423			
	- Fat metabolism	425			
	- Carbohydrate metabolism	425			
	- Mineral metabolism	427			
4.1.3	Formation and removal of fermentation by-products	428			
	- Diacetyl (vicinal diketones)	429			
	- Aldehydes (carbonyl compounds)	432			
	- Higher alcohols	432			
	- Esters	433			
	- Sulphur compounds	434			
	- Organic acids	435			
	- Evaluation of aroma compounds (according to Miedaner)	436			
4.1.4	Other reactions and changes	437			
	- Changes of nitrogen compounds	437			
	- Lowering of the pH value	438			
	- Changes in the redox properties of beer	438			
	- Changes in the beer colour	439			
	- Precipitation of bitter substances and polyphenols	439			
	- Clarification and colloidal stability of beer	439			
4.1.5	Effects of different factors on yeast	440			
4.1.6	Flocculation of the yeast (break formation)	442			
4.1.7	Degeneration of the yeast	442			
4.1.8	Physiological condition of yeast . .	443			
4.2	Pure yeast culture propagation . . .	443			
4.2.1	Basics of yeast propagation	444			
4.2.2	Isolation of suitable yeast cells . . .	445			
4.2.3	Propagation in the laboratory	445			
4.2.4	Yeast propagation in the brewery . .	447			
	- Yeast propagation plants	447			
	- Assimilation procedure	451			
	- Single vessel pure yeast culture procedure	452			
	- Open yeast propagation	454			
4.3	Conventional fermentation and . .	455			
4.3.1	Fermentation tanks – equipment of the fermentation cellar	456			
	- Fermentation tanks	456			
	- Layout of the open				

fermentation cellar	456	of the CCVs	481
4.3.2 Fermentation cellar yield	459	4.4.2 Cyindroconical tank fittings	482
4.3.3 Management of open primary fermentation	460	- Control and operating elements and safety fittings	482
- Pitching	460	- Control and operating eleme	482
- Fermentation management in the fermentation tank	462	- Cooling of the CCV	490
- Degree of attenuation	464	- Methods for controlling and automating cooling	497
- Beer transfer from the tank	468	4.4.3 Managing the fermentation and maturation in CCVs	498
4.3.4 Yeast collection in the tank	470	- Special points to consider when fermenting and maturing in CCVs	500
4.3.5 Processes during beer maturation in conventional tanks	470	- Cold fermentation – cold maturation	503
- Saturation of beer with carbon dioxide under pressure	470	- Cold fermentation with a ccelerated maturation in a CCV	504
- Beer clarification	471	- Warm fermentation without pressure – cold maturation	504
4.3.6 Equipment in conventional lager cellars	472	- Pressure fermentation	504
- Lager cellar installations	472	- Cold fermentation – warm maturation	505
- Lagering tanks	472	- Cold primary fermentation with programmed maturation	505
4.3.7 Performance of lagering in conv. tanks	473	- Warm primary fermentation with normal or forced maturation	506
- Beer transfer	474	4.4.4 Yeast cropping from the CCV	506
- Pressure regulation	474	- Time of yeast cropping	507
4.3.8 Storage vessel tapping	475	- Methods of collecting yeast	508
- Establishment of the connection	475	- Treatment and storage of the yeast crop	508
- Pressure during tapping and emptying	476	- Monitoring the yeast crop	510
4.3.9 Drawing off from conventional tanks	476	4.4.5 Beer quality before filtration	511
- Blending unit	476	4.4.6 Beer recovery from surplus yeast	511
- Pressure regulator	477	- Separation by means of sedimentation or filtration	512
- Recovery of tank bottom beer	477	- Yeast separation	512
- Deep cooling of the beer	477	- Beer recovery using a decanter	512
- Fore-run and post-run	477	- Membrane filtration of the yeast	513
4.4 Fermentation and maturation in cyindroconical vessels	478	- Vibration micro-filtration (VMF)	514
4.4.1 Construction and installation of cyindroconical vessels	478	- Treatment of tank bottom beer (yeast beer)	514
- Design, shape and construction material of cyindroconical vessels	478		
- Size of CCVs	479		
- Location and arrangement			

4.4.7	CO ₂ recovery	515	influences on the flavour stability after bottling	578	
4.4.8	Immobilised yeast	517			
4.5	Beer filtration	518	4.7	Carbonisation of the beer	579
4.5.1	Various filtration methods	519	4.8	Special methods for production	581
	- Separation mechanisms	519	4.8.1	High gravity brewing	581
	- Filters	520	4.8.2	Ice beer production	583
	- Filter aids	520	4.8.3	Processes for removing alcohol	585
4.5.2	Structural forms of filters	524		- Membrane separation process	585
	- Mass filters	524		- Heat treatment processes / distillation	589
	- Powder filters	525		- Suppression of alcohol formation	593
	- Sheet filters (frame-type filters)	539	4.9	Accident prevention in the	595
	- Membrane filters	540	4.9.1	Danger of accidents due to	595
	- Multi Micro-System-Filter	542	4.9.2	Work in pressure vessels	596
	- Areas of filtration	543	4.9.3	Working with kieselguhr	597
	- Kieselguhr-free beer filtration	543	4.9.4	General advice regarding accident prevention	598
4.6	Beer stabilisation	554	• 5	Filling the beer	609
4.6.1	Microbiological stabilisation	555	5.1	Filling in returnable glass bottles	609
	- Pasteurisation	556	5.1.1	Returnable glass bottles	609
	- Flash pasteurisation	556		- Advantages and disadvantages of glass bottles	609
	- Hot filling of beer	559		- Glass bottle production	609
	- Pasteurisation in a tunnel pasteuriser	559		- Bottle shape	609
	- Cold sterile filling of beer	559		- Bottle colour	611
4.6.2	Colloidal stabilisation of beer	560		- Surface coating	612
	- Nature of colloidal hazes	561		- Scuffing	612
	- Improving the colloidal stability of beer	562		- Bottle aftercoating	612
	- Technological measures for improving colloidal stability	562		- Plastic coated light glass returnable bottles	612
	- Addition of stabilising agents	563		- Procedural steps in the filling of returnable glass bottles	613
	- Dosing with downstream hop products	570	5.1.2	Cleaning of returnable glass bottles	613
4.6.3	Filtration plant	570		- Factors which influence bottle washing	613
4.6.4	Flavour stability	573		- Bottle washing machines	614
	- Ageing process	573		- Caustic solution	630
	- Factors encouraging flavour stability	575		- Cleaning and maintenance work on the bottle cleaning machine	634
	- Measures for the avoidance of oxygen addition during filtration and bottling	577			
	- Measures to prevent negative				

- Clearing away new glass bottles and cans	635	- Barrier properties of PET	694
5.1.3 Control of the cleaned recyclable glass bottles	635	- Barrier technology	695
5.1.4 Bottle filling	641	- The importance of Scavengers	697
- Principles of filling	641	5.3.2 Production of PET bottles	698
- Principles of bottle filling machine design	644	- Production of the preforms	698
- Component elements of the bottle filling machines	645	- Stretching and blow-moulding of PET bottles	699
- Construction and mode of operation of the bottle filling organs	648	- Monitoring of the manufactured PET bottles	701
- High pressure jetting	665	- Rinsing of the new bottles	701
5.1.5 Closing the bottles	665	5.3.3 Transportation of the PET bottles	702
- Closing with crown corks	666	5.3.4 Filling of PET bottles	702
- Closure with a swing stopper	671	5.3.5 Closing of PET bottles	714
5.1.6 Cleaning the filler and the closer	672	- Plastic screw cap closures	714
5.1.7 Control of the filled and closed bottles	676	- Aluminium rolled-on closure	716
- Filling level control	676	5.3.6 Labelling of PET bottles	718
- Oxygen in the bottle neck	677	5.4 Filling of plastic returnable bottles	720
5.1.8 Pasteurising in bottles	679	5.4.1 PEN	720
- Principles of pasteurisation in bottles	679	5.4.2 Cleaning of returnable plastic bottles	721
- Important components of the tunnel pasteuriser	680	5.4.3 Inspection of foreign substances	721
- PU fuse	683	5.5 Filling of cans	725
5.1.9 Labelling and foiling the bottles	684	5.5.1 Cans and can closures	725
- Labels and foils	684	5.5.2 Storing, depalletising and removal of empty cans	729
- Label adhesive	686	5.5.3 Inspection of the empty cans	730
- Basic principle of labelling	688	5.5.4 Rinsing of the cans	731
- Head folding with foils	691	5.5.5 Filling of the cans	731
5.1.10 Dating the labels	691	- Mechanical can fillers	733
5.1.11 Controlling the labels	692	- Can filler with volumetric filling	737
5.2 Special features when filling into non-returnable glass bottles	692	5.5.6 Closing the cans	746
5.2.1 Clearing of new glass bottles	692	5.5.7 Cleaning of the can filler and closer	748
5.2.2 Rinsing	692	5.5.8 Widgets	748
5.3 Filling into PET bottles	693	5.5.9 Inspection of the filled cans	750
5.3.1 PET bottles	694	5.5.10 Pasteurisation of cans	751
- Structural properties of PET	694	5.5.11 Wraparound labelling of cans	751
		5.5.12 Dating of the cans	752
		5.6 Filling of casks, kegs, party casks, and large cans	753
		5.6.1 Filling of wooden barrels and casks	753
		5.6.2 Kegs and fittings	756

- Material, shape and size of kegs . . .	756	5.9.3	Calculation of the volume loss . . .	796
- Keg fittings	757	5.9.4	Calculation of malt usage	796
5.6.3 Cleaning and filling the keg	759	5.9.5	Importance of the loss and possible ways of reducing it	797
- Cleaning of the keg	760			
- Filling the keg	760			
5.6.4 Keg plants as a whole	762	• 6	Cleaning and disinfection	801
5.6.5 Filling of small and party kegs . . .	762	6.1	Materials and their behaviour towards cleaning agents	801
5.6.6 Filling of large cans	763	6.1.1	Aluminium vessels	801
		6.1.2	Vessels, pipes and fittings made of chrome-nickel steel	802
5.7 Transport and packaging	763	6.1.3	Hoses and seals	804
5.7.1 Transport containers	764	6.2	Cleaning agents	805
5.7.2 Treatment of plastic crates	766	6.3	Disinfecting agents	806
Elimination of foreign and damaged crates and bottles	766	6.4	Cleaning and disinfecting using a CIP system	807
- Washing of the crates	767	6.5	Cleaning procedure	814
- Crate magazine	767	6.6	Mechanical cleaning	817
5.7.3 Transport technology	768	6.7	Monitoring of cleaning and disinfection	817
- Bottle and can transport	768	6.8	Protection at work when cleaning and disinfecting	817
- Container transport	773	• 7	Finished beer	819
5.7.4 Packaging technology	773	7.1	Beer composition	819
- Packing head and packing tulips .	773	7.1.1	Components of beer	819
- Types of packer	775	7.1.2	Beer and health	822
5.7.5 Palletiser and depalletiser equipment	782	7.2	Taste and foam	824
- Robot technology	782	7.2.1	Beer flavour	824
- Design and function of the palletisers and depalletisers	783	- Beer aroma	824	
- Stacking plants for full pack pallets	785	- Palatefulness (body)	827	
- Transport plants for pallets	786	- Tingle	828	
- Pallet set positions	786	- Beer bitterness	828	
- Infeed and output equipment . . .	786	7.2.2	Beer foam	829
- Pallet magazines	786			
- Pallet control	786			
- Securing the pallets	787			
- Palletising in keg filling				
5.8 The filling plant as a whole	791			
5.9 Beer losses	793			
5.9.1 Calculation of the amount of sales beer produced	794			
5.9.2 Stocktaking and calculation of beer for sale	794			

7.3	Beer types and their special features	833	- Measurement of the diacetyl content of beer	870
7.3.1	Beers produced by top fermentation	833	- Measurement of foam stability . . .	871
	- Special features of top fermentation	833	- Determination of the carbon dioxide content	872
	- Wheat beers (Weizenbiere)	836	- Measurement of bitterness units . .	873
	- Berliner Weiße	840	- Measurement of haze tendency . .	873
	- Altbier	841	- Filterability of the beer	873
	- Kölsch	841	- Other measurements	874
	- Ale	842	7.5 Process measurement and analysis technology	874
	- Stout	842	7.5.1 Temperature meters	875
	- Porter	843	7.5.2 Flow meters	875
	- Belgian beer types	843	7.5.3 Filling level meters	876
7.3.2	Bottom fermentation beer types . .	844	7.5.4 Density meters	877
	- Pilsner type beer	844	7.5.5 Optical online measuring technology	878
	- Lager beer ("Vollbier")	845	7.5.6 Oxygen meters	880
	- Export beer	846	7.5.7 pH value meters	880
	- Black beers	846	7.5.8 Conductivity measurement	880
	- Festival beers	847	7.5.9 Limit value probes	880
	- Ice beer	847	7.5.10 Pressure measurement	881
	- Märzen	847	• 8 Small Scale Brewing	889
	- Bock beer	847	8.1 Pub breweries	889
	- Double Bock	848	8.2 Microbrewers	895
	- Alcohol-free beer	848	8.3 Hobby brewers	896
	- Dietetic beer	849	• 9 Waste disposal and the environment	901
	- Light beer	850	9.1 Environmental legislation	901
	- Malt drink (beer)	850	9.2 Waste water	902
	- Beer types with a very low distribution	851	9.2.1 Waste water costs	902
7.3.3	Trends regarding the development of beer types	854	9.2.2 Definition of terms used relating to waste water	904
7.4	Quality examination	857	9.2.3 Waste water treatment	905
7.4.1	Beer tasting	857	- Aerobic waste water treatment	
7.4.2	Microbiological examination	860		
7.4.3	Beer analysis	863		
	- Determination of the original gravity	864		
	- Measurement of beer colour	868		
	- Measurement of the pH	869		
	- Measurement of the oxygen content of beer	869
