

# Table of Contents

Foreword .....	9
About the author .....	11
Acknowledgments .....	13
1. Objectives.....	15
1.1. Purpose .....	15
1.1.1. Filtration, (see Sections 3 & 4) .....	15
1.1.2. Stabilisation (see section 5).....	16
1.1.3. Cold Sterile Filtration (see Section 6) .....	16
1.2. Major Processes .....	16
2. Required Performance .....	19
2.1. Outline of Process Requirements .....	19
2.2. Nature and Loadings of Solids in Beer Filters.....	21
2.3. Influence of Beer Stabilisation Processes on Filter Loading.....	25
2.4. Influence of Beer Haze on CSF (Cold Sterile Filtration) Processes.....	27
3. Filtration using filter-aids.....	29
3.1. Introduction .....	29
3.1.1. Background .....	29
3.1.2. Filtration Equipment.....	30
3.1.3. Design Considerations.....	31
3.2. Filter-Aids .....	32
3.2.1. Types .....	32
3.2.2. Kieselguhr .....	33
3.2.3. Perlite.....	35
3.2.4. Cellulose .....	37
3.2.5. Impact on Beer Quality .....	38
3.2.6. Impact on Process Performance .....	40
3.3. Principles of Operation.....	40
3.3.1. Mechanisms of Solids Removal .....	40
3.3.2. Filter-aid Characterisation.....	44
3.3.3. Process Model.....	47
3.4. Powder Handling and Slurrying .....	52
3.4.1. Powder Packaging.....	52
3.4.2. Powder Conveying.....	54
3.4.3. Slurrying.....	55
3.5. Pre-coating Procedures.....	57
3.5.1. First-Pre-coat .....	57
3.5.2. Second Pre-coat.....	59
3.5.3. Quantities .....	61

3.6. Body-Feed.....	62
3.6.1. Types .....	62
3.6.2. Grades.....	62
3.6.3. Mixing Grades .....	63
3.6.4. Quantity.....	64
3.6.5. Dosing Systems.....	66
3.7. Filter Performance .....	66
3.7.1. Total Suspended Solids in Feed.....	66
3.7.2. The Size and Nature of Beer Solids .....	69
3.7.3. Unfiltered Beer Solids Loading .....	73
3.7.4. Filtered Beer Solids .....	73
3.7.5. Filter-Cake.....	73
3.7.6. Microbiological Considerations .....	74
3.8. Quality Control.....	74
3.8.1. Beer Haze .....	74
3.8.2. Oxygen Pick-up.....	75
3.8.3. Microbiological Requirements .....	77
3.8.4. Beer Losses Caused by Handling Beer in the Filter Cellar .....	77
4. Filtration Equipment .....	81
4.1. General Factors .....	81
4.1.1. Design Basis .....	81
4.1.2. Operation .....	85
4.1.3. Process Hygiene, Cleaning and Disinfection .....	90
4.1.4. Process Failure and Troubleshooting.....	90
4.1.5. Power Consumption .....	92
4.1.6. Operator Safety .....	93
4.2. Candle Filters.....	94
4.2.1. General Description.....	94
4.2.2. Operation .....	96
4.2.3. Process Hygiene, Cleaning and Disinfection .....	99
4.2.4. Water Consumption .....	99
4.2.5. Maintenance .....	100
4.2.6. Process Failure and Troubleshooting.....	100
4.2.7. Operator Safety .....	101
4.2.8. Twin Flow System .....	102
4.3. Plate and Frame Filters.....	105
4.3.1. General Description.....	105
4.3.2. Operation .....	109
4.3.3. Process Hygiene, Cleaning and Disinfection .....	112
4.3.4. Water Consumption .....	112
4.3.5. Maintenance.....	112
4.3.6. Process Failure and Troubleshooting.....	113
4.3.7. Operator Safety .....	113
4.4. Horizontal Leaf Filters .....	114
4.4.1. General Description.....	114
4.4.2. Operation .....	118
4.4.3. Process Hygiene, Cleaning and Disinfection .....	120
4.4.4. Water Consumption .....	120
4.4.5. Power Consumption .....	121

4.4.6. Maintenance .....	121
4.4.7. Process Failure and Troubleshooting.....	122
4.4.8. Operator Safety .....	122
4.5. Recycling Filter-aids.....	122
4.6. Viscose Fibres.....	122
4.7. Crossflow Microfiltration .....	123
4.7.1. General Description.....	124
4.7.2. Operation including Process Hygiene, Cleaning and Disinfection.....	133
4.7.3. Quality of CMF Filtered Beer.....	135
4.7.4. Utility Consumption and Beer Losses.....	136
4.7.5. Maintenance .....	136
4.7.6. Troubleshooting.....	136
4.7.7. Safety .....	137
5. Stabilisation In-filter.....	139
5.1. Introduction .....	139
5.1.1. Background to Haze Formation and Stabilisation .....	139
5.1.2. Colloidal Haze Formation .....	139
5.1.3. Haze Prevention.....	141
5.1.4. Systems Currently in Use.....	142
5.1.5. Disposal.....	142
5.1.6. Operator Safety .....	142
5.1.7. Control of Oxygen Pick-up.....	143
5.1.8. Water Consumption.....	143
5.1.9. Impact on Beer Quality.....	143
5.2. PVPP at Main Beer Filtration.....	143
5.2.1. Principles of Operation.....	143
5.2.2. Procedures.....	144
5.2.3. Process Engineering.....	144
5.2.4. Process and Quality Control .....	146
5.3. Regenerable PVPP Systems.....	147
5.3.1. Principles of Operation.....	147
5.3.2. Procedure.....	147
5.3.3. Process Engineering.....	148
5.3.4. Process Operation.....	149
5.3.5. Process and Quality Control .....	158
5.3.6. Process Hygiene, Cleaning and Disinfection .....	158
5.4. Continuous Regenerable PVPP-Systems.....	158
5.4.1. Ecostab System by KHS.....	158
5.4.2. Continuous Beer Stabilisation (CBS) by Pall .....	160
5.4.3. Continuous Stabilisation System by Handtmann.....	162
5.5. Silica Gels with Main Beer Filtration.....	164
5.5.1. Range of Amorphous Silicas.....	164
5.5.2. Principles of Operation.....	165
5.5.3. Procedures.....	166
5.5.4. Operation.....	167
5.5.5. Process and Quality control .....	168
5.5.6. Process Hygiene, Cleaning and Disinfection .....	168

6. Particle, Fine and Final Filtration .....	171
6.1. Particle Filtration .....	171
6.2. Fine Filtration .....	175
6.2.1. Sheet Filtration .....	175
6.2.2. Depth Filter Cartridges .....	182
6.3. Cold Sterile Filtration .....	183
6.3.1. Testing of Membrane Filter Assembly .....	185
6.3.2. Pre-treatment of Beer .....	186
6.3.3. Membrane Cleaning .....	186
6.3.4. Membrane Sizing .....	187
6.3.5. Cartridge Installation in Housing .....	188
6.3.6. Installation of the Filter .....	188
6.3.7. System Design .....	188
6.3.8. Maintenance .....	191
6.3.9. Operator Safety .....	191
7. SAFETY .....	193
7.1. Supplier Obligations .....	193
7.2. Risks from Typical Filtration Materials .....	193
7.2.1. General .....	193
7.2.2. Kieselguhr and Crystalline Silica .....	194
7.2.3. Preventative Measures to be Used when Handling Kieselguhr .....	194
7.2.4. Perlite .....	195
7.2.5. Current EU-specific Legislation .....	195
8. Suggested Further Reading .....	197
Appendix .....	199
Disclaimer .....	207
