

Malt: Practical Brewing Science

1. Introduction

2. Barley

- 2.1. Introduction**
- 2.2. Origin and Classification**
- 2.3. Botany**
- 2.4. Cultivation and Growth**
- 2.5. Variety Development**
- 2.6. Selection and Grading**

3. Biochemical Changes During Malting

- 3.1. The Composition of Barley**
- 3.2. Starch and Its Degradation**
- 3.3. Proteins and Proteolysis**
- 3.4. Cell Walls and Their Degradation**
- 3.5. Lipids and Their Degradation**
- 3.6. Phenolic Compounds**
- 3.7. Physical and Biochemical Changes in Barley Kernels During Processing**
- 3.8. Production of Malt Volatiles/Maillard Reactions**
- 3.9. Dimethyl Sulfide Precursor**
- 3.10. N-Nitrosodimethylamine**

4. Malting Operations

- 4.1. Overview**
- 4.2. Steeping**
- 4.3. Germination**
- 4.4. Kilning**
- 4.5. Specialty Malt Production**

5. Principles of Malting Engineering

- 5.1. Introduction**
- 5.2. Basic Concepts of Malting Engineering**
- 5.3. Fan Curve and Operating Principles**
- 5.4. Steeping Engineering**
- 5.5. Germination Engineering**
- 5.6. Kiln Engineering**

6. Interpretation of the Malt Certificate of Analysis

- 6.1. Introduction**
- 6.2. Physical Analyses**
- 6.3. Chemical and Wort Analyses**
- 6.4. Enzyme Analyses**
- 6.5. Other Malt Analyses**
- 6.6. Conclusion**

7. Impact of Malt Quality on Brewing

- 7.1. Malt Milling and Control of Grist Fineness**
- 7.2. Malt Enzymes and Their Effect on Brewing**
- 7.3. Conclusion**

8. Impact of Malt Quality on Fermentation

- 8.1. Predictability of Fermentation Performance by Congress Wort Analyses**
- 8.2. Impact of Fermentable Sugar Potential on Fermentation Performance**
- 8.3. Impact of Assimilable Nitrogen Potential on Fermentation Performance**

9. Impact of Malt on General Beer Quality

- 9.1. Introduction**
- 9.2. Impact on Beer Color**
- 9.3. Impact on Beer Foam and Stability**
- 9.4. Impact on Colloidal Stability**
- 9.5. Conclusion**

10. Malt Contribution to the Flavor Profile of Beer

10.1. Introduction

10.2. Genotype by Environmental ($G \times E$) Factors

10.3. Malting Process Factors

10.4. Conclusion

11. Malt Impact on Flavor Stability of Beer

11.1. Introduction

11.2. Lipoxygenase-Catalyzed Oxidation of Unsaturated Fatty Acids

11.3. Strecker Degradation and Oxidative Reactions of Amino Acids

11.4. Free Radical Reactions as Measured by Electron Paramagnetic Resonance

11.5. Conclusion

12. Requirement of Attributes from Specialty Malt by Beer Style

12.1. Introduction

12.2. Lagers and Their Malt Requirements

12.3. Ales and Their Malt Requirements

12.4. Strong Ales and Their Malt Requirements

12.5. Dark Beers and Their Malt Requirements

12.6. Wheat Beers and Their Malt Requirements

12.7. Other Beer Styles

13. Malt from Other Cereals

13.1. Introduction

13.2. Hulled Barley Malt

13.3. Wheat Malt

13.4. Rice Malt

13.5. Sorghum Malt

13.6. Rye Malt

13.7. Maize Malt

13.8. Millet Malt and Buckwheat Malt

13.9. Teff Malt and Quinoa Malt

13.10. Oat Malt

14. Microflora Associated with Barley and Malt and Their Impacts on Malt Quality

14.1. Introduction

14.2. Impact on Enzymes and on the Malting and Brewing Processes

14.3. Impact on Mycotoxin Levels

14.4. Impact on Beer Gushing Potential

14.5. Conclusion

15. Microflora Associated with Barley and Malt and Their Impacts on Premature Yeast Flocculation

15.1. Introduction

15.2. Detection of the PYF Potential of Malt

15.3. Possible Causes and Mechanisms

15.4. Monitoring and Prevention of PYF

16. Sprouted Grains for Food and Beverage Applications

16.1. Introduction

16.2. Sprouted Wheat

16.3. Sprouted Rice (Pregerminated Rice)

16.4. Sprouted Oats

16.5. Sprouted Pulse Seeds

16.6. Conclusion

17. Principal Considerations for Handling and Storage of Malt

17.1. Introduction

17.2. Management of Grain and Malt Moisture

17.3. Control of Malt Breakage

17.4. Change of Enzyme Activities During Storage

17.5. Malt Transferring Equipment

17.6. Prevention of Grain Dust Explosions

18. Innovations for Better and Sustainable Barley and Malt

18.1. Introduction

18.2. UAV Technology for Raw Material Selection

18.3. Sustainable Malting and Steep Water Conservation

18.4. Minimization of Malting Loss

18.5. In Situ Monitoring of Malting Progress

18.6. Homogeneous Kilning of a Malt Batch

18.7. Artificial Intelligence and Machine Learning

18.8. Breeding Through New Molecular Technologies

18.9. A Holistic Approach to Create Malt-Forward Beers

Appendixes

A Commonly Used Abbreviations and Acronyms

B Major Commercial Malting Companies: Production Capacity in Thousands of Metric Tons

C1 Selection of Base Malts Commercially Available in North America

C2 Partial List of Specialty Malts Commercially Available in North America

D Malt Color Conversion from ASBC to EBC

E Malt Diastatic Power (DP) Conversion from ASBC to EBC

F Temperature Conversion from °C to °F

G Commonly Used Conversions and Calculations
